

ShopNest Store Power BI Capstone Report

1) Top Categories by Total Sales:

Question Statement: Identify the top 10 product categories by total sales.

Visualization:

Explanation:

A horizontal bar chart was used to display the top 10 product categories based on total sales. The chart helps identify the best-performing categories and their contribution to overall revenue. Categories at the top generated the highest sales, indicating stronger customer demand and market performance.

2) Delayed Orders Analysis:

Question Statement: Determine the number of delayed orders in each category.

Visualization:

Explanation: A bar chart was used to analyze delayed orders across product categories. The visual highlights categories that experienced the highest number of

delayed deliveries. Understanding these delays can help improve logistics and supply chain efficiency.

3) **Monthly Comparison of Delayed and On-Time Orders:**

Question Statement: Create a dynamic visual that compares the number delayed orders received earlier for each month

Visualization:

Explanation: A clustered column chart was used to compare delayed and on-time orders across different months. The visual highlights monthly delivery performance and helps identify periods with higher delays. Most orders were delivered on time, indicating efficient order fulfillment operations.

4) **Payment Method Analysis:**

Question Statement: Analyze the most frequently used payment methods by customer using appealing representation such as pie chart.

Visualization:

Explanation:

A pie chart was used to show the distribution of payment methods used by customers. Credit cards account for the largest share of transactions, indicating that customers prefer digital payment methods. Other payment options contribute a smaller portion of total transaction.

5) Product Rating Analysis:

Question Statement: Determine the top 10 highest-rated products and the bottom 10 lowest-rated product using bar or column chart.

Visualization:

Explanation:

Highest-Rated Product - A bar chart used to identify product categories with the highest average review scores. These Categories received positive customer feedback and demonstrated strong customer satisfaction. High ratings suggest good product quality and customer experience.

Lowest-Rated Product - A bar chart used to display product categories with the lowest average review scores. These Categories may require attention to improve product quality, customer service, or overall customer satisfaction. The visual helps identify areas for improvement.

6) State-Wise Sales Analysis:

Question Statement: Identify and visually represent states with high and low sales.

Visualization:

Explanation:

A horizontal bar chart was used to compare sales across different states. The visual identifies states that contribute the highest revenue and helps understand regional sales performance. Top-performing states can be targeted for future business expansion and marketing efforts.

7) Seasonal Sales Patterns:

Question Statement: Investigate and visualize any seasonal patterns (Quarterly) or trends in sales data over the course of the year.

Visualization:

Explanation:

A line chart was used to analyze sales trends across quarters of the year. The charts shows fluctuations in sales performance, with certain quarters generating higher revenue than orders. This information can help the business plan inventory and marketing activities according to seasonal demand.

8) Revenue Analysis:

Question Statement: Determine the total generated by ShopNest Store and analyze how it changes over time (Yearly).

Visualization:

Explanation:

A line chart was used to analyze yearly revenue trends for ShopNest Store. The chart shows a significant increase in revenue from 2016 to 2017, followed by continued growth in 2018. The upward trend indicates strong business performance and increasing customer purchases over time.

Conclusion:

This dashboard was developed to analyze key business metrics of ShopNest Store, including sales performance, delivery status, customer reviews, payment methods, seasonal trends and revenue growth. The analysis revealed that revenue and sales increased over time, with certain product categories contributing significantly to overall sales. Most orders were delivered on time, while a few product categories experienced higher delivery delays. Customer review analysis helped identify both categories. Overall, the dashboard provides valuable insights that can support data-driven decision-making and help improve business performance.
